

Klassifier: AI Powered Text and Voice Analytics

NeviTech

Nevitech is a software development and consulting company serving leading Turkish firms in telecommunication, insurance, and finance.

Backed by over 8 years of experience and a team of 72 developers, we provide software consulting services to corporate clients as an outsource. The company boasts a team of experts proficient in .Net, Angular, React, Java, Spring, Oracle, and business analysis.

Our Services include:

- **Artificial intelligence solutions**
- **Tailor-made Software Solution**
- **Outsourcing Development**

Klassifier

01 **Voice** and **Sentiment** are two products offered on the Klassifier platform.

02 Klassifier is a comprehensive **No Code platform** that lets users build AI models effortlessly, without any coding.

03 In addition to the products, the platform provides pre-built models such as named entity recognition (NER), profanity detection, and emotion analysis.

Our Products

Voice

Our product leverages two different models to **convert, translate audio and video into text**, enhancing analysis and decision-making.

Some features of the product:

- Real-Time Transcription
- Summarization
- Speaker Identification
- Custom Vocabulary
- Noise Resilience
- On-Premise Solution

Our Products

Speech-to-Text Model

Converts audio to text, automating transcription to enhance analysis, efficiency, and accuracy.

Speech Translation

Converts spoken language into text in another language, enabling clear communication in multilingual settings.

Our Products

Sentiment

Our product uses two models to analyze customer interactions, **identifying emotions and offensive language**, providing insights to enhance satisfaction and protect reputation.

Some features of the product:

- Fast Analysis Results
- Text Preprocessing
- Customized Models
- API Integration
- Customizable Reports
- On-Premise Solution

Our Products

Sentiment Analysis Model

Classifies the emotional tones of texts as positive, negative, or neutral, offering valuable insights into user sentiments.

Offensive Language Analysis Model

Detects and classifies offensive or non-offensive content, serving as a valuable tool to filter unwanted content on various platforms.

Pre-Built Models

Emotional Analysis Model

Understands and classifies the emotional content of texts, allowing users to detect emotional tones like joy, sadness, and fear.

Profanity Detection Model

Understands and classifies profanity in texts, effectively filtering and managing inappropriate language across different contexts to maintain a respectful and professional environment.

Pre-Built Models

Named Entity Recognition (NER) Model

Classifies texts by recognizing special entities within the text, such as names of individuals, organization names, and locations.

Topic Detection Model

Identifies and categorizes topics within texts, streamlining content organization and analysis across various domains such as customer interactions to improve management and gain actionable insights

Social Media Case

Customer Insights

Valuable insights from feedback, emails, and social media.

Manual Costs

High time and resource costs for large dataset analysis.

Monitoring Challenge

Manual post management is time-consuming and difficult.

Brand Reputation

Harm from banned words and hate speech on social media.

Problems

Social Media Case

Sentiment Analysis Model

Klassifier's Sentiment Analysis model enables automatic categorization and in-depth analysis of customer feedback in different platforms.

Offensive Language Analysis Model

Klassifier's Offensive Language Analysis Model detects banned words and hate speech in social media posts related to your brand.

Use of Sentiment

Call Center Case

Service Quality

Monitoring employee performance and emotional states is crucial for service quality and customer satisfaction.

Real-Time Tracking

Challenging to track employees emotional states and communication styles in real-time.

Text Conversion

Converting and analyzing conversations into text is difficult and time - consuming.

Risking Customer Experience

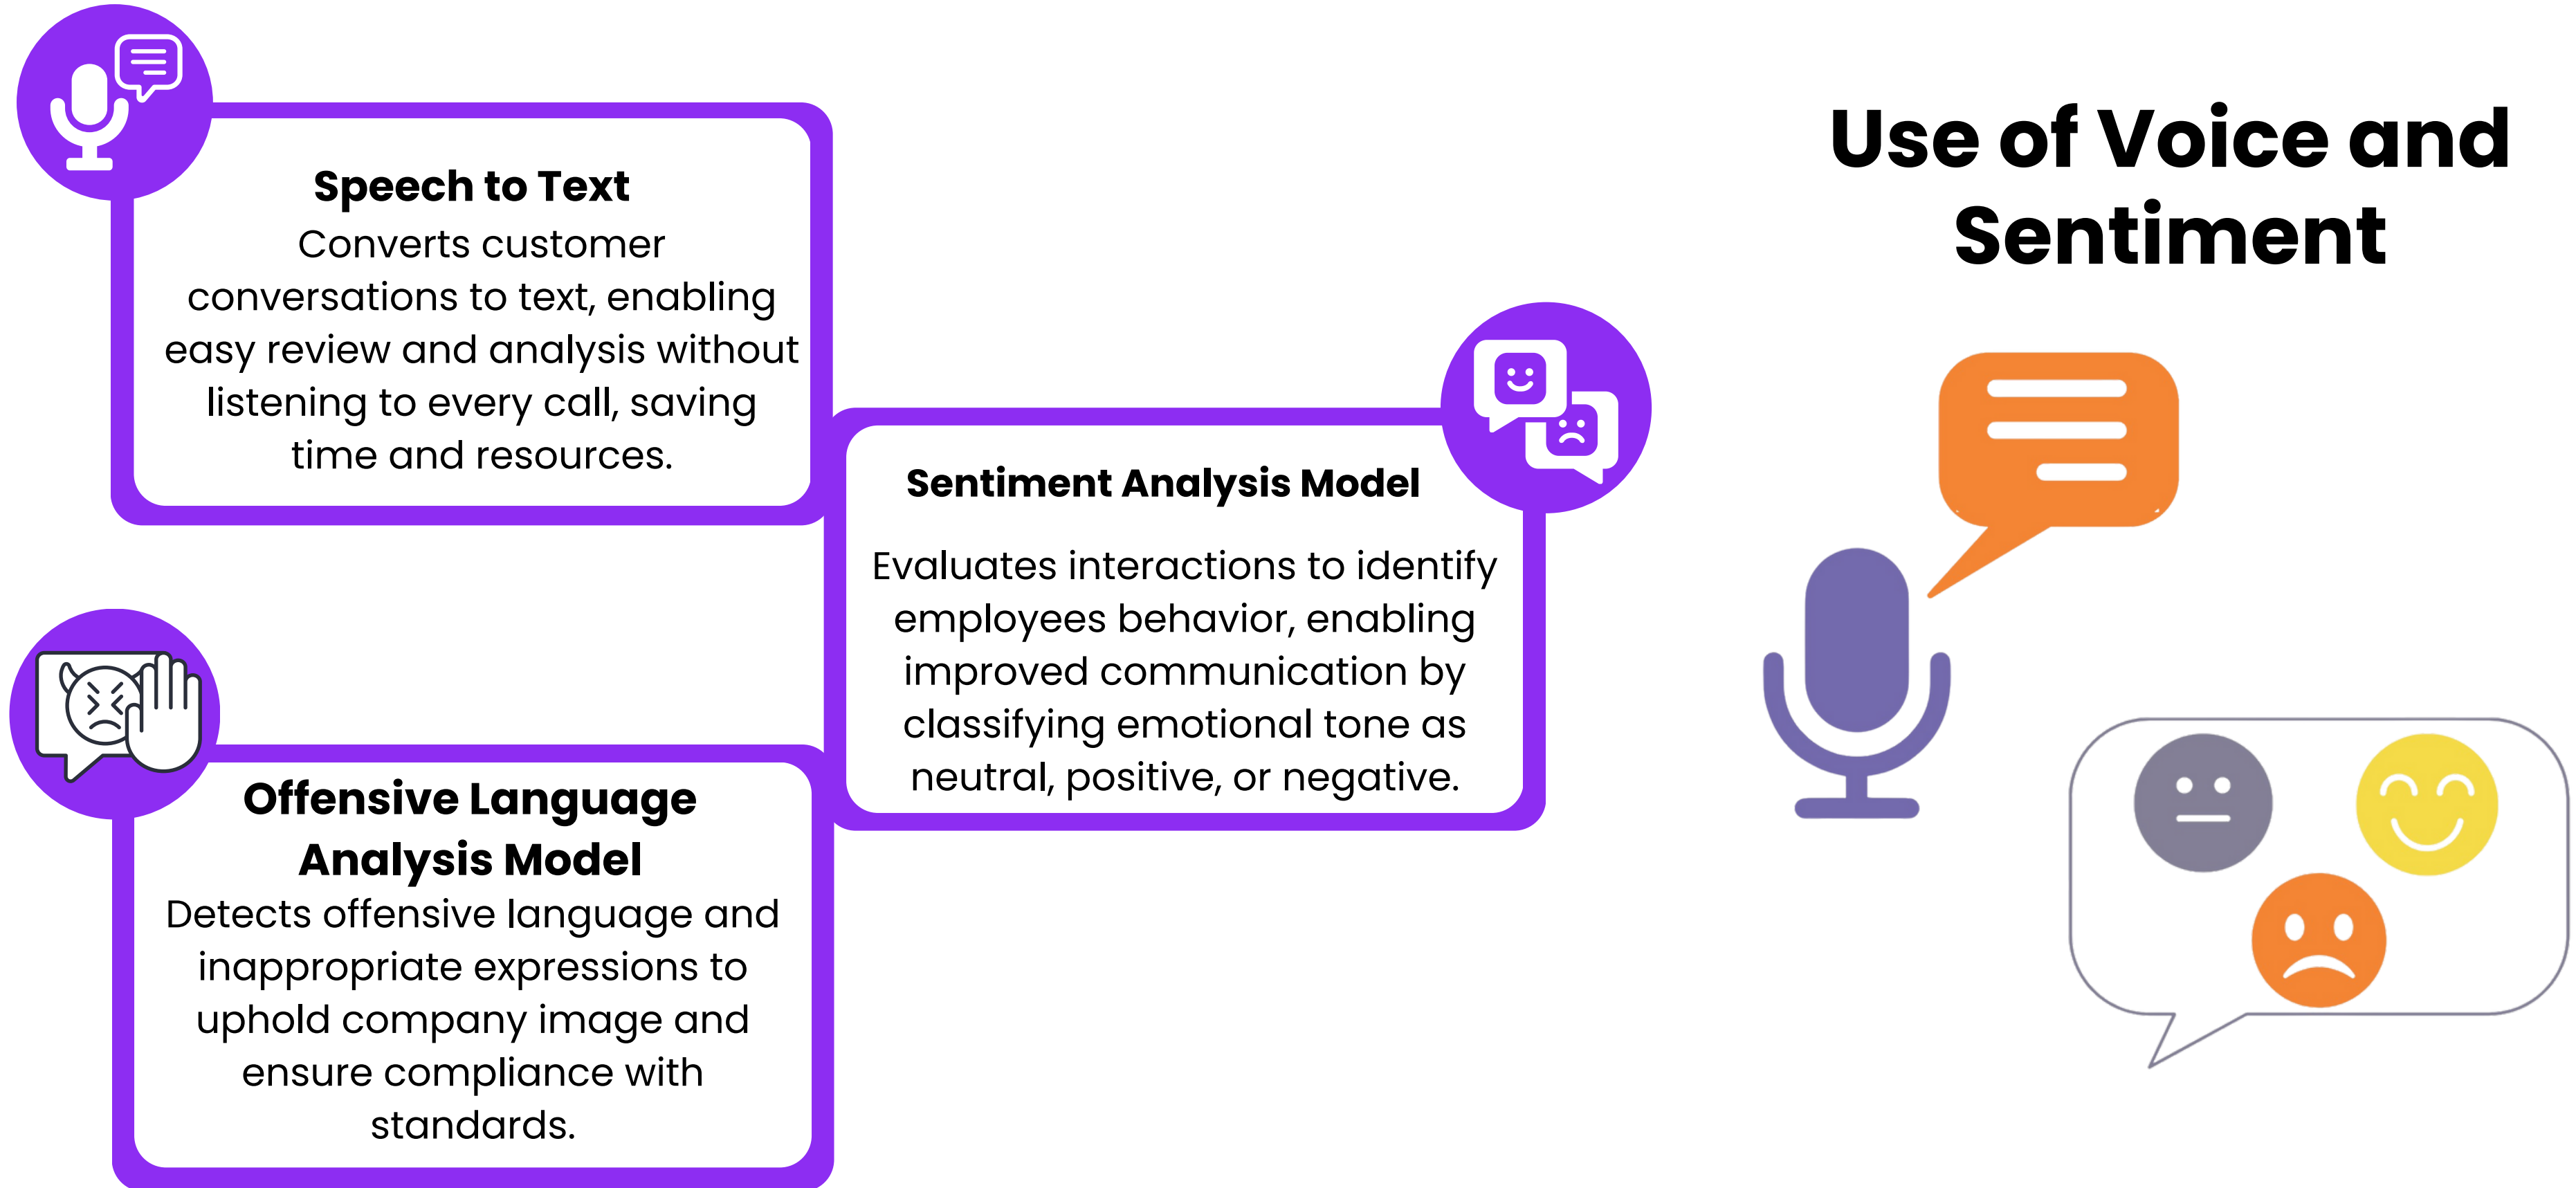

Hard to identify employees stress or negative patterns, risking customer experience and reputation.

Why Klassifier?

01

User-Friendly Interface: Klassifier is an AI-powered classification tool with a user-friendly interface, allowing users without prior machine learning knowledge to navigate and use the system efficiently.

02

Carry Your Data Anywhere With You: Klassifier is a cloud-based application that allows users to access and manage their data from anywhere, requiring only a browser.

03

Continuous Learning: Klassifier is a continuous learning classification tool that continuously improves itself by creating models, allowing users to analyze their data effectively.

04

Flexible and Quick Reporting: Klassifier offers fast, flexible, and reliable reporting to track progress and manage workflows efficiently.

Strategies

01

Free Account: Allowing potential customers to test the product and see its value.

02

Partnership Programs: Collaborating with companies that offer other solutions that complement the product.

03

Demos and Webinars: Organizing live and online presentations demonstrating the product's features and functionality.

04

Customer Success Stories: Providing case studies and testimonials showing how the product is used in different industries.
